

>The washing powder to use

Garden Safe laundry powder offers the best grey water safe cleaning solution on the market in Australia today. Formulated for use in both top or front loading washing machines, Garden Safe doesn't contain artificial fillers like many laundry powders. You get exactly what you pay for, effective, low allergenic, grey water safe laundry powder. It's perfect for the garden and even kinder on the washing machine. The 10kg box of Garden Safe delivers more than 600 washes. Even the packaging is environmentally friendly.

>Watering the garden

Combining the advanced filtration of the Gator Pro with the technology of the G-Drip tube is the best combination. G-Drip is the only complete subsurface drip tube irrigation package especially designed to be used in conjunction with grey water diversion devices. It has been developed by the world's leading drip irrigation company Netafim.

The G-Drip delivers a slow, even and precise application of grey water throughout the soil through evenly spaced pre-inserted, non-clog emitters giving the most uniform distribution compared to other systems on the market. The length of tube should be 100 metres per person in the home (20 litres per minute per 100 metres equals, maximum run length 20 metres, so cut the tube into $5 \times 20 = 100$ metres)

State water authorities have different regulations on the best use of grey water, however all agree the best way to disperse the water is by subsurface drip tube. The G-Drip irrigation kit includes: 100m Bioline dripline, 25m purple LDPE and all associated fittings.

>Gator Pro at a glance

This compact, economical unit meets the full requirements of state and federal water authorities. Rebates differ from state to state. In Victoria and NSW the rebate is \$500 subject to installation by a registered plumber. The Gator Pro has the Australian Water Mark for a pumped system and a gravity system, it's approved by EPA in NSW, Queensland, Victoria, Northern Territory, Western Australia, South Australia, and ACT. The unit has an inbuilt overflow so if the power is switched off to the unit it will send the water to waste. This is a requirement of the Watermark and all water authorities.

- All Gator Pro parts and the pump are covered by a 12 month replacement warranty
- The Gator Pro must be installed by licensed plumbers
- The Gator Pro is UV resistant high grade poly ethylene which will not break down in the sun
- The pump and filters can handle water at elevated temperatures
- The Gator Pro is registered as a gravity greywater device, a minimum of two metres in height is required to effectively operate the G Drip tube if there is enough fall on the site this unit will work without a pump
- A 240 volt power outlet and access to waste plumbing pipes (50mm) will be required for installation
- Size of unit, Length 590mm, Width 370mm, Height 500mm
- The unit can be partially buried to a maximum depth of 400mm

The WaterMark is a symbol of compliance to the plumbing regulatory requirements of Australian Standards.

> The Gator Pro

The Matala Gator Pro is the most efficient and advanced grey water diversion device available on the market. It turns grey water into a most valuable, usable garden resource with ease.

The Matala Gator Pro is designed to reuse water from the laundry, bath and shower. Independent tests have shown the saving can be around 500 litres per day in a household of 4 people.*

> Step 1 Collect

The Gator Pro diverts water from the laundry, bath and shower

> Step 2 Filter

Gator Pro's state of art filter mats offer the best filtration available for grey water

Gator Pro's Matala 3D progressive filtration system is proven technology in 40 countries

The Gator Pro diverts grey water from the waste pipe and filters the water as it passes through four, state of the art, revolutionary Matala filter mats. Independent laboratory tests have shown that the Gator Pro can remove up to 90% of suspended solids.

The level detecting pump pushes the water into a grey water drip tube. This happens automatically. The Tiran grey water drip tube from Netafim is the recommended drip tube to water the garden. Waste is turned into a very valuable resource.

> Step 3 Flourish

The G-Drip dripline system delivers a slow and precise application of greywater throughout the garden. See *Watering the garden* section overleaf for more information
